Software Engineering Assignment – Jira & Scrum

Assignment Title:
Agile Software Development using Scrum and Jira

Objective:
To understand and practically implement the **Scrum framework** using Jira by creating a software project, preparing a Product Backlog, planning a Sprint, assigning tasks, tracking progress, and documenting the Sprint outcome.

Question

Create and manage a software project using Jira by following the Scrum framework.

You will be assigned **one unique software system** from the list provided by the faculty. Using Jira, create a Scrum project and demonstrate the complete workflow from **Product Backlog → Sprint Planning → Task Execution → Progress Tracking → Sprint Completion**.

Your Jira project must contain:

1. **Project creation** using the Scrum framework.
2. A suitable **Product Backlog** containing at least **10 user stories/tasks**.
3. Each user story should contain:
    - User story description
    - Priority
    - Story points
    - Acceptance criteria
4. Create **at least 2 Sprints**.
5. Move selected backlog items into **Sprint 1** and perform Sprint Planning.
6. Assign issues to team members.
7. Update issue status as work progresses, such as:
   To Do → In Progress → Done
8. Create at least **one Bug** and track its resolution.
9. Complete Sprint 1 and record the Sprint result.
10. Create **Sprint 2** using the remaining backlog items.
11. Show the **Jira Scrum Board** and progress of your project.
12. Submit screenshots as evidence of your work.

● Important: Individualized Work

To ensure that **no two students have the same output**:

- Each student/team will be given a **different software project scenario**.
- Students must create their **own user stories, priorities, story points, task assignments and sprint planning**.
- **Copying user stories, screenshots or Jira boards from another student is not allowed.**
- Screenshots must clearly show the **student's own Jira project/board**.

Screenshot Requirement

Students must submit **minimum 8 screenshots**, including:

1. Jira project creation/project dashboard
2. Product Backlog
3. User story with description & acceptance criteria
4. Sprint 1 planning
5. Scrum Board during execution
6. Assigned tasks/issues
7. Bug created and its status
8. Completed Sprint / Sprint Report
9. Sprint 2 board
10. Final project dashboard/report

Each screenshot must contain the student's Jira project name/key or other identifiable project information.

🏷 Suggested Project Scenarios

You can distribute different scenarios so students don't get identical work:

No.	Software System
1	Online Food Delivery System
2	Hospital Appointment System
3	College Event Management System
4	Vehicle Rental System
5	Online Examination System
6	Library Management System
7	Hostel Management System
8	Bus Ticket Booking System
9	Gym Management System
10	Online Grocery System
11	Blood Bank Management System
12	Hotel Room Booking System
13	College Placement Management System
14	Online Course Management System
15	Courier Tracking System
16	Parking Management System
17	Movie Ticket Booking System
18	Pet Clinic Management System
19	Restaurant Table Booking System
20	Travel Package Booking System

☆ One extra rule I strongly recommend

The final Jira output should not be identical even if two students receive the same domain. The Product Backlog, user stories, story points, priorities, sprint contents, assignments and bugs must be independently created.

Date of Submission: 31/10/26
